- Personalized Evidence-based-medicine uses stored health data
 - from patient diagnoses, lab work, insurance claims and general demographic information
- to move beyond the reactive approach of treating illness, allowing healthcare providers to predict and prevent future illnesses
- use past health data to help you in the future

- For how long do you expect to live?
- For how long do you expect your data to be readable and **understandable**?
- How should you store your health **data** (and **context**) to live that long?
 - In particular, should you store only the **answers** (in database fields) or should you also store the **questions** (user interface forms)?

Type of data	Examples	Collected by	
		Humans	Machines
Observations	<ul style="list-style-type: none"> - Temperature - Blood pressure 	<ul style="list-style-type: none"> - Transcriptions - Subjective - Lack of standards 	<ul style="list-style-type: none"> - Sensors data (ICU, fitness, ...) - Lack of data collection protocol (device, local, ...)
Evaluations	<ul style="list-style-type: none"> - Diagnosis - Adverse reaction risk 	<ul style="list-style-type: none"> - Subjective - Protocols change - Need to teach terminology 	
Instructions (orders)	<ul style="list-style-type: none"> - Lab orders 	<ul style="list-style-type: none"> - More reliable 	
Actions (result of an action)	<ul style="list-style-type: none"> - Lab reports - Surgery reports 	<ul style="list-style-type: none"> - Incomplete data 	<ul style="list-style-type: none"> - Automatic analysis
System usage (use process mining)	<ul style="list-style-type: none"> - Audit trails - Messaging logs 	<ul style="list-style-type: none"> - Credentials sharing 	<ul style="list-style-type: none"> - Time synchronization issues

Understanding Data

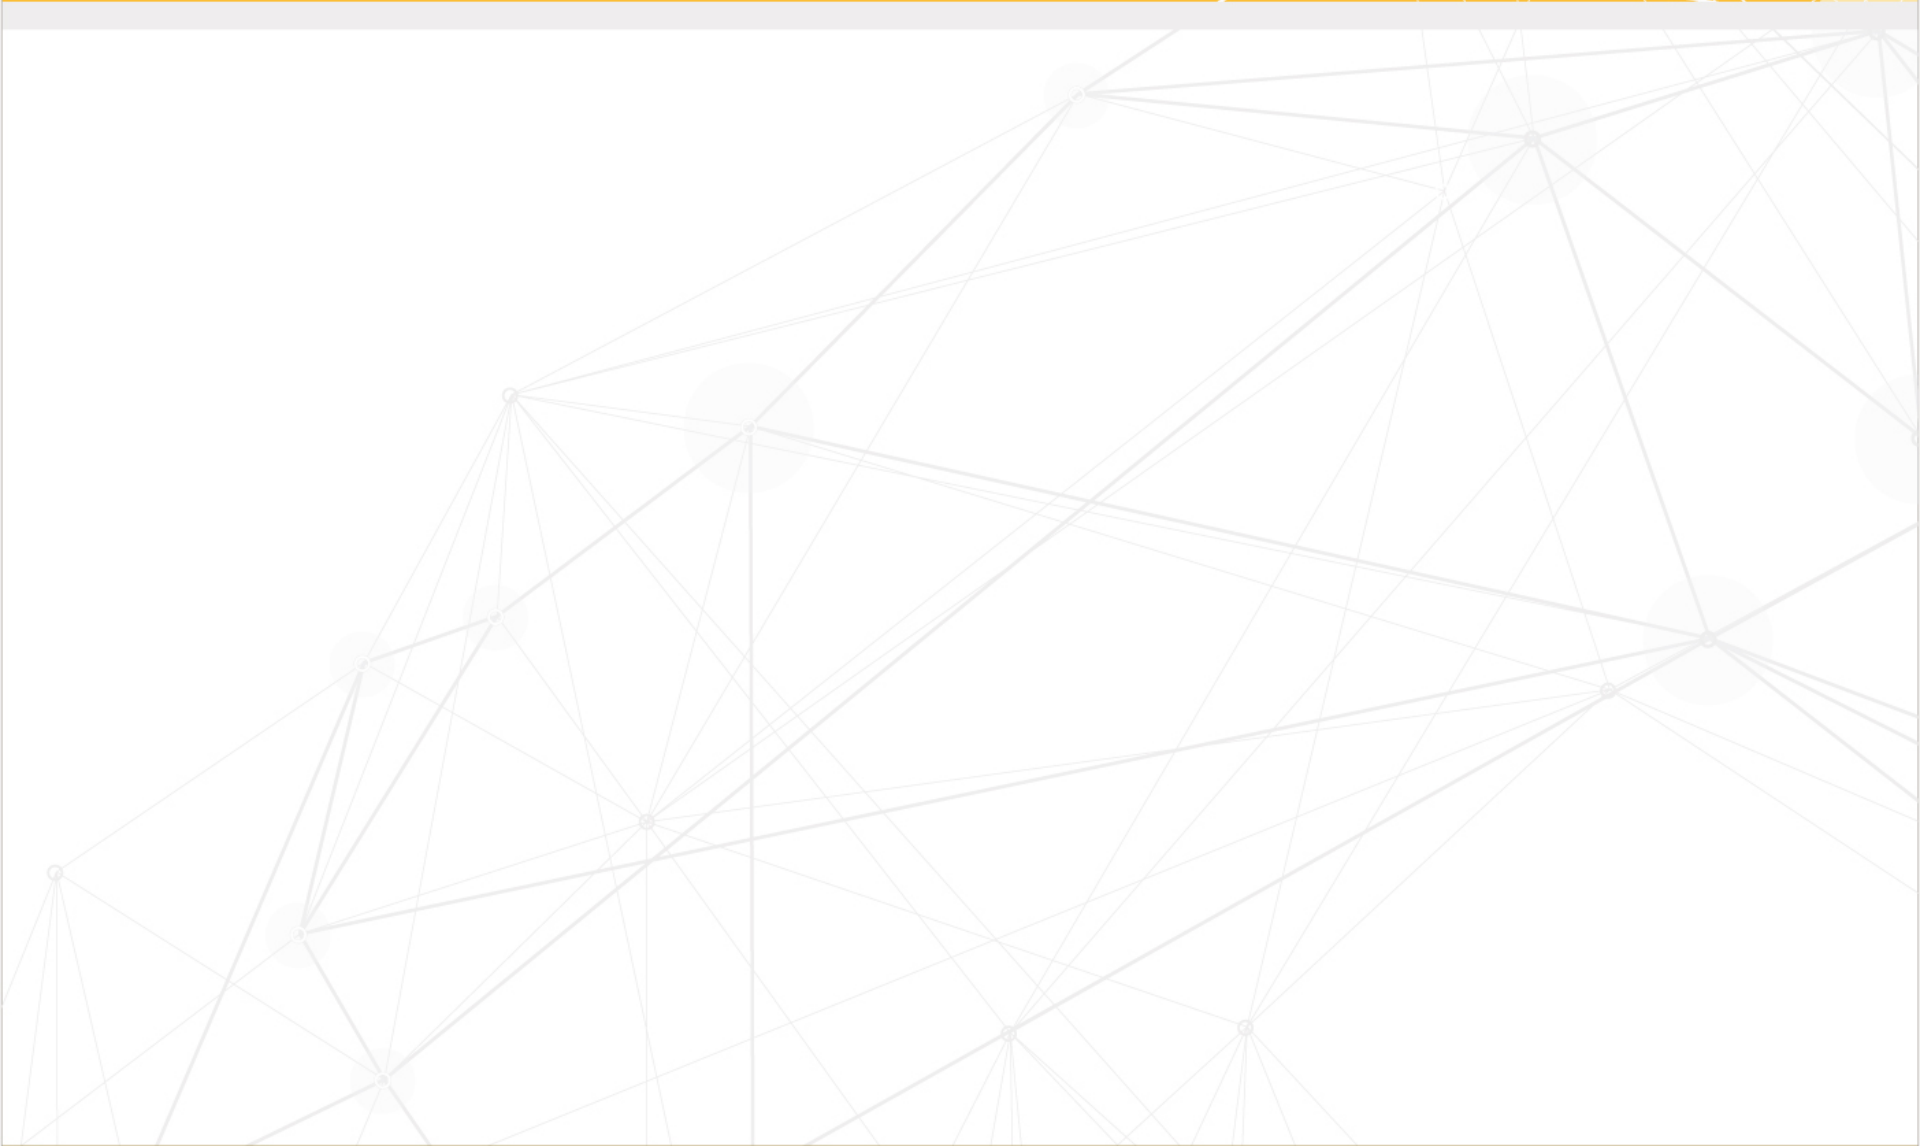

- Quality of data in healthcare is a big issue.
We need:
 - Standardization in the way data is collected (protocol)
 - Standardization in the language (terminologies)
 - Standardization in the data structures

Quality of data

- QoD changes throughout time
- Lack of collection protocols
- Difficulty in understanding too much, heterogeneous data, with different or unknown levels of confidence associated

Meaning of data

- Health Professionals education
 - Semantics / terminologies
 - We need an international language regarding medical terms
